

Postdoctoral Position with the Neutrino group

Argonne National Laboratory

The High Energy Physics Division at Argonne National Laboratory invites applications for a postdoctoral position with the Neutrino Group. The group is working on the MINOS long-baseline neutrino oscillation experiment, currently running at Fermilab, and on the next generation of neutrino experiments such as NOvA and Double Chooz in the pursuit of measuring the neutrino oscillation parameter θ_{13} . We are seeking a recent Ph.D. in high energy physics with the skills to play a leading role in data analysis for the Double Chooz Reactor Neutrino experiment. Double Chooz is currently under construction in France and hopes to quickly begin taking data next year.

Applicants should send a detailed CV, a list of publications, and a description of research interests and skills and arrange for three letters of recommendation to be sent to the HEP Division Director Harry Weerts (weerts@anl.gov) and Dr. Maury Goodman (maury.goodman@anl.gov). A recent Ph.D., obtained within the last 3 years, is required. Postdoctoral appointments are for two years with the possibility of renewal for a third year. For additional information about the position, please contact Dr. Maury Goodman. Applications will be accepted until the position is filled.

Argonne is an affirmative action/equal opportunity employer; women and minorities are encouraged to apply.
